SUMMARY

I'm an entry-level software developer with a passion for technology, seeking to join a creative team that emphasizes learning and growth within a company. Born in Belarus, I discovered my enthusiasm for coding and technology while in high school. I went on to graduate from the best tech university in the country and gained experience in engineering while working for the Belarusian equivalent of the American National Standards Institute, providing high-precision measurement services. I even utilized a special train to calibrate and verify a rail scales which were used at the natural gas/fossil-fuel power plant. My past experiences have allowed me to develop key skills including critical thinking, a solid work ethic, and excellent self management which will help me become an accomplished software developer. I aim to bring a friendly demeanor, while being attentive to problem solving and project management responsibilities.

SKILLS
